## ASB Summer Internships 2024

**Award amount:** up to £1000

**Date opens:** 19<sup>th</sup> February 2024

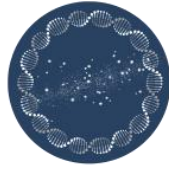

**Date closes:** 28<sup>th</sup> March 2024

The Astrobiology Society of Britain has two ASB Summer Internships available for 2024. The aim of this scheme is to provide contributing financial support for undergraduate or MSc/MSci research internships hosted by a UK-based institution for projects that fall within the field of astrobiology. Internships can offer undergraduate or MSc/MSci students valuable research experience while also providing a window into potential career paths.

Funding is open to those enrolled on Undergraduate or Master's programmes at UK institutions, and who will be hosted at a UK institution. Some examples of UK institutions that have carried out astrobiology research in the past and present are listed [here](#) and many have hosted ASB interns before. Please note, this list is not exhaustive; any HE institution or academic researcher involved in astrobiology and related fields is eligible.

Successful applicants (or their advisor) will be expected to complete a short report at the end of their project detailing the outcomes of the project for inclusion in the ASB newsletter, and on our website. Internship reports from previous years can be found [here](#). Proposals will be reviewed by the ASB committee and successful applicants will be informed within ~3 weeks of the closing date listed above.

**To apply:** please complete the form [here](#) and return to [astrobiosoc@gmail.com](mailto:astrobiosoc@gmail.com) with the subject line 'Summer Internships 2024' by the closing date listed (28/03/2024).
